

American Microgrid Veritone

Veritone is accelerating the world's transition to more sustainable, reliable, and affordable energy. Our customers include utilities, independent power producers, and developers who use our software to ...

Transform unstructured video, audio, and text into AI-ready tokens that power smarter models, automated workflows, and measurable business outcomes. Your audio and video content holds ...

Microgrids are continuing to drive the transformation and decentralization of our energy grid, but planning and managing microgrids can be complex. A new white paper from Veritone explores how ...

A collection of articles, videos, white papers and reports on Veritone microgrid solutions

Veritone energy solutions consist of a forecaster, optimizer, and controller to add optimization and resilience to any macro or microgrid. Veritone uses these technologies to simulate ...

In this episode, we discuss the rise of Autonomous Microgrid Technology and how AI will help utilities optimize energy grids. Microgrids are localized power generation systems in which distributed energy ...

Transform your workflows and superpower your teams with innovative, custom AI solutions, AI services, and a powerful enterprise AI platform.

American Microgrid Solutions has developed solutions for more than 200 sites in 35 states. We work with cities around the country including Orlando, Alexandria, Tempe, Detroit, and Baltimore and ...

Microgrids can disconnect from the utility network and run autonomously to supply reliable power to local residents - even when the rest of the grid goes down. In fact, access to emergency ...

Renewable grid assets with Veritone controllers can enable autonomous grid control and decision making across thousands of supported grid devices, helping to ensure optimal economic ...
