

# Are Americans restarting solar power

Solar capacity continues to surge from sprawling utility-scale solar farms to rooftop panels powering residential homes. Backed by falling costs, federal incentives, and public demand ...

US solar added 18 GW in early 2025, but Trump policies could slash growth by 55 GW by 2030, raising costs and risks, says a new SEIA report.

As of yesterday's data release by the Energy Information Administration (EIA), which covers the first nine months of 2025, total electricity demand has risen by 2.3 percent. That ...

That expected growth is down from the record 37 gigawatts of solar power capacity that was added in 2024 and may dwindle further as some analysts believe that solar power may face ...

Solar deployment and electric vehicle (EV) sales broke records in 2023 and 2024. Renewables now dominate new power generation capacity, while new domestic clean energy ...

As indicated by the new EIA report, the solar power outlook over the next 12 months is fairly reasonable. It's also worth noting that the Energy Department is continuing to fund new ...

Solar projects are making it easier for Americans to choose solar energy to power their homes. Department of Energy Since 2008, hundreds of thousands of solar panels have been installed across ...

We expect solar electric generation will be the leading source of growth in the U.S. electric power sector. In our January Short-Term Energy Outlook (STEO), which contains new forecast data ...

In the long term, solar energy's remarkable gains in efficiency and fast-tumbling prices make its future bright. But the short-term picture is also sunnier than you may suppose.

The Energy Information Administration (EIA) reported that, in 2024, the United States added a record 30 gigawatts (GW) of utility-scale solar to the grid, accounting for 61% of new ...
