

China Solar Power Station Release

China leads global utility-scale solar capacity for projects in announced, pre-construction, and construction phases. According to Global Energy Monitor's Global Solar Power Tracker, China has ...

The 277 GW of utility-scale solar capacity installed in China in 2024 alone is more than twice as much as the 121 GW of utility-scale solar capacity installed in the United States at the end of ...

China has unveiled the world's first dual-tower solar thermal power station in the Gobi Desert, using 27,000 mirrors to generate renewable energy round the clock, a landmark in clean ...

The first phase of the power station, which became operational at the end of 2023, has already proven its worth. It has successfully generated over 40 million kilowatt-hours of electricity, ...

China's solar generating capacity is expected to surpass coal for the first time this year, according to the country's top electricity industry group, marking a milestone in the country's ...

Solar surged 64% in H1 2025 with 380 GW added worldwide, led by China's record pace, keeping 2025 on track for new highs.

In a bold move that could redefine the future of renewable energy, China has announced plans to construct a colossal solar power station in space, capable of generating energy equivalent to ...

During a conference at the Chinese Academy of Sciences, Long Lehao, the chief designer of the Long March rockets and a member of the Chinese Academy of Engineering, revealed that his ...

Positioned approximately 36,000 kilometers above Earth, this groundbreaking initiative seeks to establish a massive space-based solar power plant capable of generating 100 billion ...

China has taken solar power to the open sea by building the world's largest floating solar plant, and it's already changing how renewable energy can be deployed where land is scarce. The ...
