

Daily wind power generation trend

Use WeatherPower graphics to show daily wind and solar electricity generation based on weather of the day and installed capacity in your area.

Given the clear economic, social, and environmental advantages of wind power as a cornerstone of a renewable energy system, the main obstacles to progress today come not from ...

Looking for archive data?

Choose your location on the map and fill out the form below to see a chart with wind power production for the chosen turbine model (this determines your capacity). You can view the current forecast as ...

Record renewables growth led by solar helped push clean power past 40% of global electricity in 2024, but heatwave-related demand spikes led to a small increase in fossil generation.

Why are Midwest grid operators turning away wind power?

Combined Wind and Solar is a graphical representation of estimated wind and solar power production amounts for the Current Operating Day and the Next Day.

This dataset contains yearly electricity generation, capacity, emissions, import and demand data for over 200 geographies. You can find more about Ember's methodology in this ...
