

Factory price bus tie breaker in Ireland

What is a bus tie breaker?

In electrical distribution systems, a bus tie breaker is used to connect two sections of an electrical bus serving different power sources. Bus tie breakers are usually open, keeping the two sections separate. When one power source fails, the tie breaker can be closed to maintain service through the section, avoiding a planned service outage.

What is a tie breaker?

A tie breaker is a type of circuit breaker that connects two sections of an electrical bus serving different power sources. They are commonly used to connect electrical systems to power sources and load circuits, as well as to protect people and equipment from overcurrents. In the context of maintenance, tie breakers offer significant advantages.

What is a bus tie switchgear?

Product Overview: The Bus Tie Switchgear is a critical component in medium-voltage (MV) power distribution systems, designed to interconnect and isolate multiple busbar sections. Rated for 10KV (IEC) to 15KV (ANSI) applications, it ensures load balancing, enhanced power continuity, and rapid system reconfiguration during faults or maintenance.

What is an Electrical busbar?

Electrical busbars come in various forms such as solid bars, flat strips, or insulated combs. They are typically made from copper, brass, or aluminium. The primary function of a busbar is to carry electrical power from incoming feeders and to distribute it safely and efficiently to the outgoing feeders.
