

National Electronic Design Competition Microgrid

Develop a framework for dynamic formation of networked microgrids for optimized operations under both normal and emergency conditions. This project.

Sandia National Laboratories developed the Microgrid Design Toolkit (MDT), a decision support software for microgrid designers that is publicly available for download.

The National Renewable Energy Laboratory (NREL), partnered with MIT Lincoln Laboratory, will host a competition to spark innovation in microgrid controller technologies ...

NLR is collaborating with the San Diego Gas & Electric Co. to model a microgrid in Borrego Springs, California, and evaluate how a microgrid controller with advanced functionality ...

This research focuses on the development of new technologies and design tools for remote microgrids to improve performance and reliability through the use of non-traditional technologies or operating ...

Sandia's latest Microgrid Conceptual Design Guidebook released in April 2022, publicly available to provide communities a starting place to investigate microgrid design.

The concept of microgrids (MGs) as compact power systems, incorporating distributed energy resources, generating units, storage systems, and loads, is widely acknowledged in the ...

This white paper focuses on tools that support design, planning and operation of microgrids (or aggregations of microgrids) for multiple needs and stakeholders (e.g., utilities, developers, ...

This report captures and shares experiences and lessons from the Miramar assessment, conceptual design, solicitation, engineering design, and construction process as well as from other ...

This white paper will explore how key articles of the National Electric Code (NEC) impact microgrid design and engineering to ensure safe and reliable operation.
