Our innovative solutions tackle unsightly condensation,combat harmful black mold,and reduce heat loss,all while enhancing thermal efficiency.

What is double glazing & how does it work?

Double glazing is an insulated glass unit(IGU) that is assembled and sealed in a controlled factory environment. When compared to single glazing,double glazing can provide better thermal insulation,keeping your home warmer in winter and cooler in summer,allowing you to have a more consistent and comfortable temperature year-round.

What is a double glazed window & door?

Double glazed windows and doors are made up of two panes of glass separated by a spacer. The space between the panes is typically filled with air or an inert gas like argon. Double glazing is an insulated glass unit (IGU) that is assembled and sealed in a controlled factory environment.
