

Solar power will come back in a few years

We find that, due to technological trajectories set in motion by past policy, a global irreversible solar tipping point may have passed where solar energy gradually comes to dominate ...

US solar added 18 GW in early 2025, but Trump policies could slash growth by 55 GW by 2030, raising costs and risks, says a new SEIA report.

Almost 70 gigawatts (GW) of new solar generating capacity projects are scheduled to come online in 2026 and 2027, which represents a 49% increase in U.S. solar operating capacity ...

Solar plants are touted to operate for around 25 years -- half the time or less that fossil fuel or nuclear plants operate. The Ivanpah solar plant in California -- touted to be the largest of its ...

Is solar power going to take over the world? The past few years have seen a frankly astounding acceleration in the rate of its deployment, with total generation capacity doubling between...

"Solar remains the fastest-growing energy source in the United States, and despite a difficult economic environment, this growth is expected to continue for years to come," said SEIA ...

There may be a few urban centers that can't gain all the power they need from local solar panels, but my guess is 95% of the world that is within 35° latitude of the equator can do so just fine.

China and the US may be reducing policy support for the solar power sector, but Goldman Sachs Research still expects rapid growth, with solar installations set to rise by 57% between 2024 ...

Since the Industrial Revolution, human society has run on ancient solar energy--captured by plants hundreds of millions of years ago, stored in fossil fuels, and dug and ...

Explore the future of solar in 2025--key trends, new tech, and policies driving global clean energy growth.

Solar power will come back in a few years
