What is Thornton Bank wind farm?

Thornton Bank wind farm (also known as C-Power wind farm) is a monumental project off the Belgian coast and Belgium's first offshore wind farm. From its inception to its status as one of Europe's largest offshore wind projects, this wind farm showcases the viability of wind energy projects.

What is C-power Thornton Bank offshore wind farm?

The C-Power Thornton Bank offshore wind farm features Senvion 5M and 6M turbines. Power and automation technology group ABB was responsible for the design and supply of the complete electrical infrastructure of the project.

How many wind turbines does Thornton Bank have?

Thornton Bank offshore wind farm features 54 wind turbines, with a total installed capacity of 325MW. Image courtesy of REpower Systems. The wind farm is located 30km off from the Belgian coast in water depths ranging from 12m to 27.5m. Image courtesy of REpower Systems. Construction on phase one of the project commenced in May 2007.

What challenges did the Thornton Bank wind farm face?

The farm was built some 30 km off the Belgian coast in the North Sea, an area known for its strong winds and challenging conditions. Like any project of its magnitude, the Thornton Bank wind farm encountered various challenges. There was considerable public concern over visual pollution and the potential impact on the marine environment.

After a project for a nearshore wind farm was aborted because of the fear for visual pollution and objections in public opinion, the government designated a 35 x 9 km specific area for the construction ...
