How do you install solar panels on a tile roof?

The entire solar mounting system must bypass the tiles. This is typically achieved using specialized tile roof hooks. These hooks are designed to slide underneath a tile and anchor directly into the rafter. The hook's arm then extends out from under the tile, providing a solid attachment point for the rail system above the roof surface.

Should you install a solar racking system on a tile roof?

Investing in a high-quality, certified solar racking system is investing in the safety, longevity, and success of your project. Never Mount Directly on Tiles: Always use specialized tile roof hooks to anchor the mounting system to the roof rafters, bypassing the tiles completely.

Should solar panels be leveled?

No roof is perfectly flat. Rails can be leveled to create a uniform plane for the solar array, which not only looks better but also prevents stress on the solar panel frames. They also provide the spacing needed for the gap between the panels and the roof surface. This airflow is crucial for keeping the panels cool.

How do I install solar panels?

Panels can be connected in rows or columns. The junction box can be installed at the top or bottom of the solar tile. Wear gloves when handling flashings, as they may have sharp edges. Don't rush through the placement of flashings - ensure they are straight.
